

## INSTRUCTIONS FOR INSTALLING APPLICATION FOR BLUE&ME™ MAP

**WARNING** *The update process is an operation to be performed with maximum attention to the instructions. In the event of errors the system may not work. Remember that once this procedure has been performed it will not be possible to return to the previous software version.*

1. Download the .zip file containing the update application
2. Unzip the .zip file named '5\_5\_01 Blue&Me MAP Update Package Signed' and extract the files into a new folder on your PC (e.g. c:\Blue&Me MAP). Check that the following 5 files are present:

- **install.inf**
- **CheckPlatform.ARM920.CAB**
- **MXY\_N\_x\_4\_PND-C1conf.ARM920.CAB**
- **MXY\_N\_x\_4\_PND-C1matrix.ARM920.CAB**
- **PND\_Application.zip**

3. Copy the files above into a BLANK USB memory stick, with a capacity of at least 128 Mb, but no more than 8GB.
4. Store the files previously downloaded in the USB stick main directory (not within a folder), checking that they have all been copied correctly.

**WARNING** *Before starting the update the mobile phone needs to be turned off. During the software update the steering wheel buttons shouldn't be pressed!*

*The update time depends on the car and the USB memory model, on average it can vary from 5 to 15 minutes.*

5. With the car stationary and the ignition key in the **STOP** position, insert the memory stick in the **Blue&Me™** USB port situated on the centre console or in the glove compartment box.
6. Turn the ignition key to the **MAR** position, WITHOUT STARTING THE CAR, turn the radio on taking care to remove any warning messages (e.g. door open...) on the display by pressing the "Mode" or "Menu" button (depending on the car to be updated).

**WARNING** *Never extract the memory stick from the USB port for any reason before the software update procedure has finished properly! The USB stick should remain inserted even if the information "RE-START..." appears on the panel followed by the date and time and the radio starts to play again.*

7. On the control panel the message: "**UPDATE IN PROGRESS**" will be

displayed and the voice message "**update started**" will be played. If this does not happen turn the key to the **STOP** position and then **MAR** again. During the update different messages on the progression of the process may be displayed.

8. When the update has ended, the message "**COMPLETE**" will be displayed on the control panel and the voice message "**update complete, remove the USB stick**" will be played.

9. The **Blue&Me™** update process is complete, turn the ignition key to the **STOP** position and extract the USB stick.

10. The Map will need to be reconfigured with **Blue&Me™** again.

If the update is not complete the message "USB error" will appear on the display and the following voice message will be played: "There was an error during the update". In this case repeat the procedure starting again from point 1.
