

INSTRUCTIONS FOR UPDATING SW VERSION 5.4 BLUE&ME

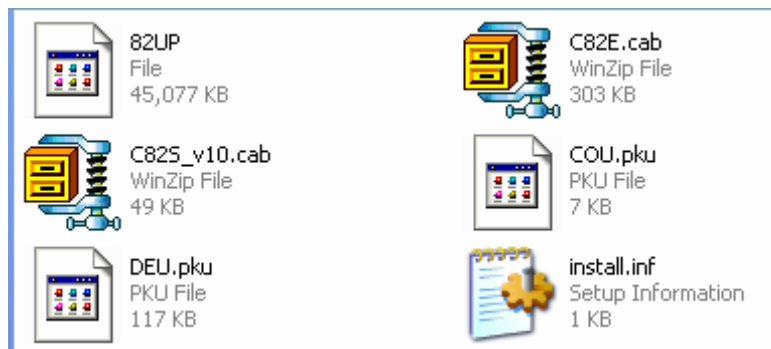

WARNING If **Blue&Me™** works properly with phones connected and there is no need to listen to music files from new generation Apple™ products such as *iTouch* or *iPhone*, proceeding with the new software update is not recommended.

If your car was recently produced it may already be up-to-date, if in doubt install the update of version 5.4, in this case the procedure will only last a few seconds

The update process is an operation to be performed with maximum attention to the instructions. In the event of errors the system may not work. Remember that once this procedure has been performed it will not be possible to return to the previous software version.

1. Download the .zip file containing the update application. *[The total size of the files to be downloaded is 45 Mb]*
2. Unzip the .zip file named 5.4.09 Update Package and extract the files into a new folder on your PC (e.g. c:\Blue&Me). Check that the following 6 files are present:

- **install.inf**
- **82UP**
- **C82E.cab**
- **C82S_v09.cab**
- **COU.pku**
- **DEU.pku**

3. Copy the files above into a BLANK USB memory stick, with a capacity of at least 128 Mb, but no more than 8GB.
4. Store the files previously downloaded in the USB stick main directory (not within a folder), checking that they have all been copied correctly.

WARNING *Before starting the update the mobile phone needs to be turned off. During the software update the steering wheel buttons shouldn't be pressed!*

The update time depends on the car and the USB memory model, on average it can vary from 5 to 15 minutes.

5. With the car stationary and the ignition key in the **STOP** position, insert the memory stick in the **Blue&Me™** USB port situated on the centre console or in the glove compartment box.
6. Turn the ignition key to the **MAR** position, WITHOUT STARTING THE CAR, turn the radio on taking care to remove any warning messages (e.g. door open...) on the display by pressing the "Mode" or "Menu" button (depending on the car to be updated).

WARNING Never extract the memory stick from the USB port for any reason before the software update procedure has finished properly!
The USB stick should remain inserted even if the information "RE-START..." appears on the panel followed by the date and time and the radio starts to play again.

7. On the control panel the message: "**UPDATE IN PROGRESS**" will be displayed and the voice message "**update started**" will be played. If this does not happen turn the key to the **STOP** position and then **MAR** again. During the update different messages on the progression of the process may be displayed.
8. When the update has ended, the message "**COMPLETE**" will be displayed on the control panel and the voice message "**update complete, remove the USB stick**" will be played.
9. The **Blue&Me™** update process is complete, turn the ignition key to the **STOP** position and extract the USB stick.

NOTE Following the installation a new file will have been added to your memory stick – called LOG.TXT
This details and confirms the upgrade. This file should also be removed/deleted from your USB pen after upgrading, if you wish to perform the update on another Fiat vehicle.

If the update is not complete the message "USB error" will appear on the display and the following voice message will be played: "There was an error during the update". In this case repeat the procedure starting again from point 1.

Before: M.M. PLAYER **Now:** MEDIA PLAYER
Before: CONTINUOUS PLAY **Now:** REPEAT TRACK
Before: DEVICE UPDATE **Now:** (item removed)

WARNING Once the update has finished, connection with phones previously connected will automatically happen without intervention, for the first few connections immediately after the update some disconnections from the Bluetooth may occur, as **Blue&Me™** will test various protocols to find the best one for the type of phone used.

On the phones that support a particular protocol (PBAP) the contact list will be displayed as Name and Surname regardless of how it is displayed on the phone. Depending on the phone make/model after the update you may need to copy your contacts from SIM card to the phone memory in order to synchronise the contact list with **Blue&Me™** in your car.
